

Installing Salesforce1 on your Smart Phone

- 1) Download the “Salesforce1” app from the app store/play store/iTunes
- 2) When you get to the login page, look for an icon in the upper right hand corner of the screen. It could be a gear, or three dots. Select the option “Change Server” or “Add Server” or “Log into a custom domain”

- 3) Click “Add Connection”

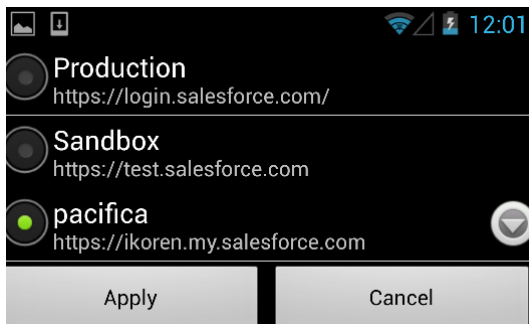

- 4) Enter a name for the connection, then in the URL field, enter:

(Android) <https://cornell.my.salesforce.com>

(iPhone) cornell.my.salesforce.com

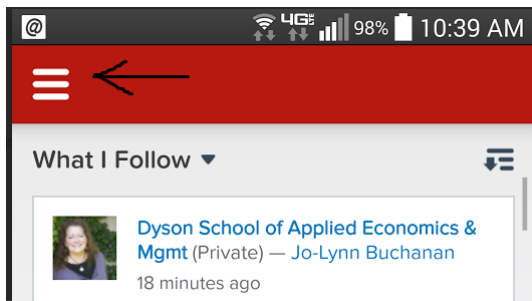

(iPhone-alternate) cornell.force.com/undergrads

- 5) Click on your new Connection and click “Apply”

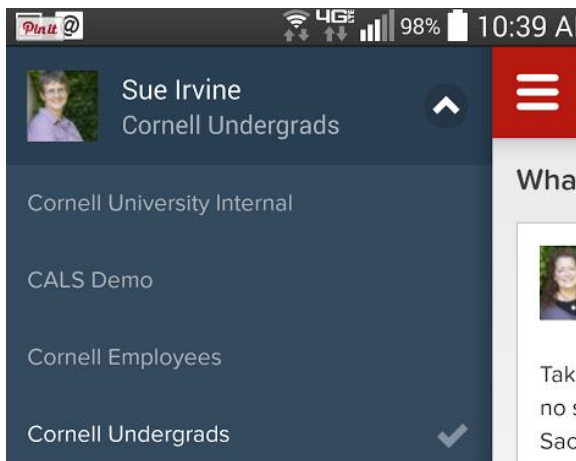

You should then be prompted to log in with your netid and password. If you see an error page, click the link that says “Login” in the upper right corner of the page. That should prompt for your credentials

6) Click the action button to access menu items, and to change the community.

7) Change the community selection to “Cornell Undergrads”

8) To post, click the Chat bubble icon in the lower right portion of your screen (be sure to select a group first!):
